Data Visualization and Storytelling: Week 2 homework

Employed adults spend time on their jobs as well as on household tasks and caring for others. The American Time Use Survey records how people spend a day. This assignment uses those data to examine women's and men's working time.

Question

Does including household and care work change the comparison of women's and men's working time?

Answer the question using a single figure created in Python. Submit only the figure, including its title and accompanying notes.

Data and setup

Open the homework repository:
`https://github.com/ulrichwohak/python-dataviz-homework02`.

Click **Fork**, select your own GitHub account as the owner, keep the repository name, and click **Create fork**. Then clone your fork to your computer. Replace `YOUR-USERNAME` with your GitHub username:

```
git clone https://github.com/YOUR-USERNAME/python-dataviz-homework02.git
cd python-dataviz-homework02
```

Follow `README.md` to set up the environment, then open `analysis.ipynb`.

The notebook loads `data/working_time.csv`, included in the repository. This file contains prepared estimates from the 2024 American Time Use Survey for employed US adults aged 25–54. Variable definitions and source information are in `data/README.md`.

Original data: US Bureau of Labor Statistics,
`https://www.bls.gov/tus/data/datafiles-2024.htm`.
